

# Web Accessibility Fix Checklist

## Issue: Missing alt text

Fix: Add ``alt="Description"``` or use ``aria-hidden="true"``` for decorative images.

## Issue: Contrast issues

Fix: Use accessible colour palettes that meet WCAG AA standards.

## Issue: Non-descriptive links

Fix: Replace vague text like 'click here' with meaningful link descriptions.

## Issue: No form labels

Fix: Ensure every input has a visible label or use ``aria-label``` where necessary.

## Issue: Inaccessible buttons

Fix: Avoid using ``<div>`` or ``<span>`` for clickable actions; use ``<button>`` instead.

## Issue: No skip link

Fix: Include a 'Skip to content' link to improve keyboard navigation.

## Issue: Broken tab order

Fix: Ensure DOM structure reflects intended navigation order; avoid `tabindex` misuse.

## Issue: No landmark regions

Fix: Use semantic HTML like ``<main>``, ``<nav>``, and ``<footer>``.

## Issue: Missing focus states

Fix: Design visible focus styles using ``:focus-visible`` or Tailwind classes.

## Issue: Media without captions

Fix: Provide captions or transcripts for all video and audio content.
